

Kaseya® Mobile Device Management

Are your users and company data moving to mobile devices? So should your management policies!

Users are becoming increasingly mobile, and with the proliferation of Bring-Your-Own-Devices (BYOD), critical business data is being dragged along with them. Organizations are increasingly finding their users accessing email, documents and applications on smartphones and tablets, requiring them to extend robust IT systems management controls and security policies to mobile devices.

Keeping track of, protecting and updating mobile devices requires visibility into wide-reaching cellular networks that are off-limits to most administrators. As users continue to access business data and applications on their mobile devices, organizations can now use Kaseya Mobile Device Management to implement business continuity, accessibility and security policies on those devices.

Features

Audit and Inventory

Audit and Inventory is a core benefit of Kaseya's IT Automation Framework and with the inclusion of mobile management, IT professionals will now have an even wider view of remote managed devices.

- Single integrated UI for viewing and searching inventory
- Detailed device information available for drill-down
- Detailed application information available for drill-down
- Updated device information on request
- Convenient management reports

Profile Management

Profile Management allows administrators to standardize and deploy connectivity, security and application settings over the air and thus remove manual configuration procedures while increasing user productivity.

- Wi-Fi Network connectivity
- Email configuration including Exchange, Gmail, POP and IMAP
- Security settings including pin required, maximum failed attempts and strong passwords
- Kaseya Server check-in settings including time interval, geo tracking and Wi-Fi only
- Activate or Inactivate factory default options and applications
- Assign profiles to one or many mobile devices over the air

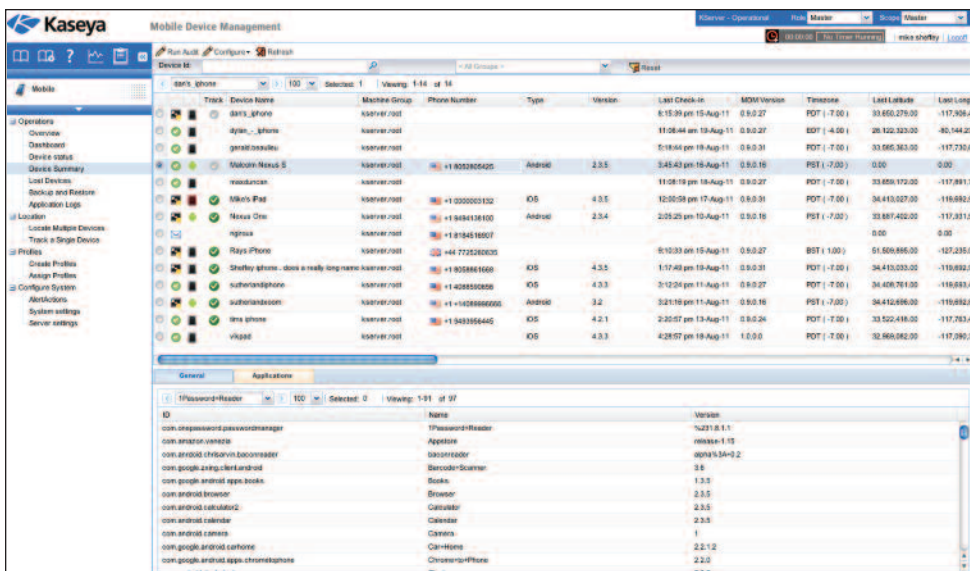

Key Benefits:

- Extend IT systems management policies to mobile devices, including iPhone, iPad, BlackBerry and Android phones and tablets
- Protect business data no matter where it sits or is accessed from
- Reduce help desk requests and increase IT efficiency such as mobile email configuration through over the air (OTA) management capabilities
- Manage all devices from desktops and servers to mobile devices from a single pane of glass for consistency and transparency throughout the organization

Why Kaseya?

- Open Architecture & Technology Advancements
- Common User Interface
- Seamless Integration
- IT Automation Capabilities
- Robust Reporting Options
- Optional Delivery Methods
- Global Presence with 10,000+ customers and over 5 million managed devices

Backup and Restore

Business continuity plays a vital role across any enterprise to ensure minimum downtime and maximum productivity. Mobile Management includes the ability to remotely backup key user data to a central repository with automated restore options.

- Backing up contacts
- Restoring contact data

Geo Location Tracking

A key benefit to managing mobile devices is the ability to leverage the GEO positioning capabilities inherent within the device. Whether locating due to theft or loss or to navigating the user to the nearest mobile support center, GEO Location Tracking provides administrators the ability to act proactively on behalf of their mobile users.

- Historical device location tracking
- On demand location query
- Map-based interface

Loss or Theft Handling

Loss or theft of mobile devices is a common issue across the entire spectrum of users. Waiting for someone to answer the phone in the hope of it being returned may not be an option. In addition, critical business information may be compromised as a result of the loss. Mobile Management has the unique ability to perform a series of operations to ensure maximum data protection while also providing the ability to locate and retrieve.

- Wipe
- Make phone unusable (lock phone)
- Report phone location
- Alert and create ticket when lost phone checks in
- Sound alarm tone

About Kaseya

Kaseya is the leading global provider of IT Systems Management software. Kaseya solutions empower virtually everyone — from individual consumers to large corporations and IT service providers — to proactively monitor, manage and control IT assets remotely, easily and efficiently from one integrated Web-based platform.
