

Kaseya Antivirus 1.2 Upgrade Best Practices Document

Before installing the KAV 1.2 upgrade, verify that the following prerequisites have been met:

- Verify that Kaseya Server K2 (6.1 or later) is installed
- Verify that all available hotfixes have been applied
- Verify that the user performing the installation on the server has administrative privileges

KAV Client Prerequisites

[none]

KAV 1.2 - Upgrading the KServer

- NOTE -Uninstallation of the previous version of KAV is NOT required
- Download and run the KAV 1.2 executable on the K-Server. Accept all installer default options during installation.
- NOTE -No reboot or any other action is required

Upgrading the Client

[not necessary]

Installing KAV Antivirus Protection on Servers

- From the KAV module select the appropriate server(s) to install server protection on. Apply profiles to these machines.
