

Don't Take Our Word For It

Organizations Leverage the Kaseya IT Automation Framework to Reduce IT Costs

IT systems management is complex, costly and often a pain in the butt. A decentralized IT systems management strategy that relies on point products or appliances only exacerbates that complexity, sapping resources and budget through non-scalable, manual maintenance. Luckily, it doesn't have to be that way.

The integrated Kaseya IT Automation Framework reduces the cost of optimizing performance and availability of your distributed systems by automating much of the repetitive, manual processes typically associated with IT systems management. Integrated functionality and customizable agent procedures streamline operations and enable multiple policies to be applied to multiple machines at once. Regular tasks such as issuing a patch, updating software or conducting a hardware audit that used to take days, now take a matter of minutes. As a result, your administrators are more efficient, saving you time, staffing resources and the all-important budget that you can then reallocate to other needs.

Thousands of organizations have leveraged Kaseya to make users' lives easier, create business efficiencies and make the business run more agile. Isn't it time you achieved that dream?

"Kaseya allows me to manage all 500 distributed systems on my own and still have time to work on more proactive, innovative projects. It also means that the school district is saving \$100,000 per year by not having to hire additional administrators."

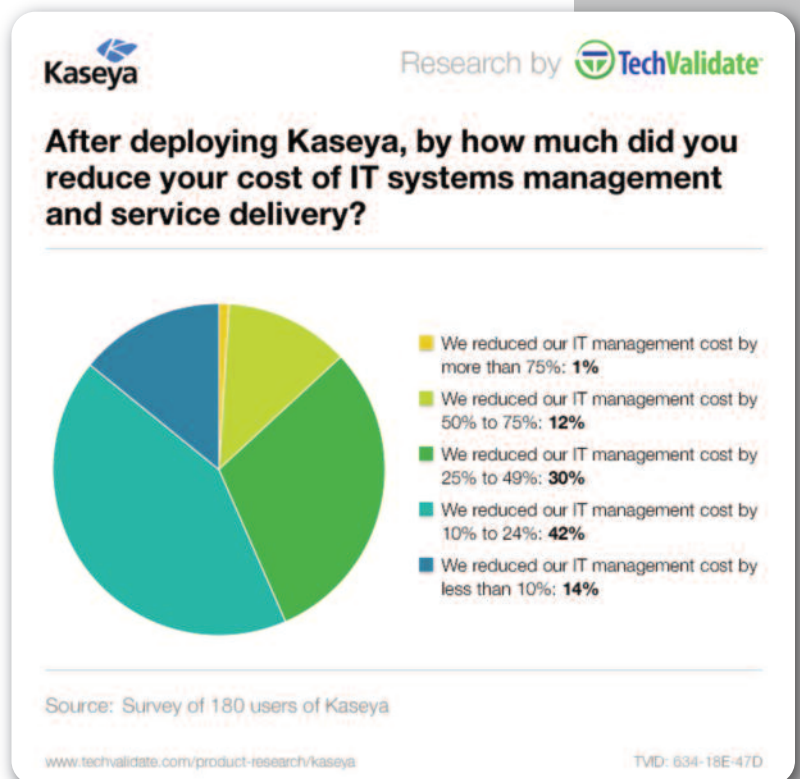

- Brad Huffaker,
technology director, North Conejos School District

"Kaseya allows us to support more users with higher-quality services with the same resources. We've basically already paid for Kaseya through the IT efficiencies it creates. The auditing function saves us \$5,000 a year on hardware alone."

- Greg Franseth,
director of RIS, University of Kentucky

"Kaseya has really made our jobs much easier in the IT department. We're able to support city employees much more efficiently without being a burden. This allows the city to refocus revenue and resources to resident-facing services, improving the lives of everyone who lives or works in Hagerstown."

- Scott Nicewarner,
IT manager, City of Hagerstown, Maryland

About Kaseya

Kaseya is the leading global provider of IT Systems Management software. Kaseya solutions empower virtually everyone — from individual consumers to large corporations and IT service providers — to proactively monitor, manage and control IT assets remotely, easily and efficiently from one integrated Web-based platform.
