

Up Close and Personal With VSA's Next-Gen Reporting

Dive deeper into best practices for simple, flexible reporting that showcases your true business value to clients and executives.

First-generation remote monitoring and management (RMM) tools were designed to provide static reports. For a while, these reports met business needs nicely. However, they just don't cut it in the competitive environment of today, where businesses need to differentiate themselves to succeed.

Today, companies need to provide in-depth reports that define their value, which often goes unseen, to clients, with the snap of a finger. Let's see how next-generation reporting capabilities can bridge the gap between the perceived output of your completed work and its actual value, allowing your clients and executives to see the real worth of your work.

Best practices for IT reporting

An advanced RMM solution should provide IT superheroes with the following capabilities so they can showcase the real value of their work quickly and easily.

01

VALUE-DRIVEN REPORTS

Reports should show how your IT team is helping your organization achieve its strategic objectives, such as reducing risk or improving employee productivity, by solving work-blocking IT problems proactively.

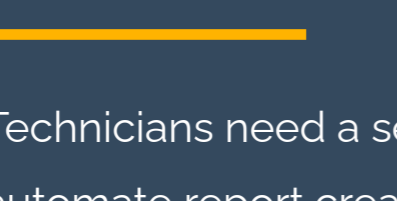

02

INTEGRATIONS

IT value comes from multiple tools – RMM/endpoint management, backup, IT documentation, security, etc. The impact of these vital tools needs to be combined into unified reports.

03

AUTOMATED WORKFLOWS

Technicians need a set of tools to automate report creation and distribution, including a process for validation and approval.

04

SECURITY ASSISTANCE

An important feature of a value-adding report is visibility into security information such as antivirus alerts, patch compliance, and other security controls.

The pervasive challenge of "proving" IT value

For busy technicians, the ability to generate value-driven reports that are impressive and less time-consuming to build is a crucial requirement.

01

LACK OF TIME AND EXPERTISE

IT professionals lack the time and expertise to create custom reports that showcase their value, leading to a wide gap in perception between the perceived value of completed work and the actual value it provides.

02

MISSING DATA FROM THIRD PARTIES

Out-of-the-box reports often do not take into account third-party data, such as antivirus, backups or CRM metrics, which are necessary to establish value.

03

NO TRENDS AND NO CUSTOMIZATION

Out-of-the-box reports rarely provide meaningful insights or trends over time and are often difficult to customize.

04

NO ABILITY TO EXPORT TO BI TOOLS

In most cases, out-of-the-box reporting from your RMM or endpoint management solution cannot be exported to third-party business intelligence (BI) software.

Let's talk about VSA's value-based reporting solution

The value of a business is always in question. The best way to answer this is with meaningful data and visual trends provided by VSA's next generation executive reporting.

01

COVERS EVERYTHING UNDER THE SUN

Includes **98 predefined reports**, spanning **18 categories**, to cover nearly **all IT use cases**.

02

CUSTOMIZATION IS KING

Flexible **look and feel** customization to suit **company branding** and **client/user preferences**.

03

POWERFUL SCHEDULER

A powerful scheduler that prepares and sends **individual reports** and **report sets** to the right people.

04

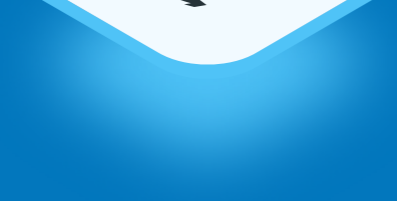

DYNAMIC REPORT BUILDER

Dynamic report builder with a custom layout displaying **any VSA dataset** utilizing **one of FOUR visual components** and **flexible SQL-based data filtering**.

What can VSA reporting do for you?

Showcasing your value with the simple click of a button.

01

MAXIMUM FLEXIBILITY

VSA data is open to multifaceted use from within VSA to third-party BI tools like PowerBI or Tableau. Benefit from automated creation and delivery of reports in different formats such as PDF, Excel or HTML.

02

ENLARGED DATA LIBRARY

Seamless data source integration with all Kaseya products to increase the depth and breadth of report quality.

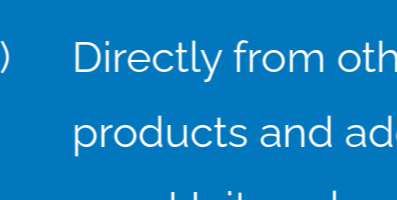

03

ENHANCED INSTRUMENTATION

Best-in-class visual report building, utilizing Wyn Enterprise technology. Drag-and-drop report builder with a robust components library.

04

REDUCED OPERATIONAL COSTS

Cross collaboration with other leading IT tools to offer dozens of value-oriented report templates that plug and play within VSA.

Kaseya VSA is a unified remote monitoring and management (uRMM) platform that enables IT teams to manage core IT security functions from a single console. Leveraging its best-in-class reporting module, you can get more done with less. Demonstrating the true value you add to your organization will be a breeze while the insights will help you boost productivity and grow your business.

To learn how VSA's advanced reporting capabilities can help showcase the unique value of your business to clients and stakeholders.
