What is Kaseya 365 Endpoint?

The only solution you need to manage, secure, back up and automate your endpoints

Let's pause for a minute and consider this. You have one tool for endpoint management, another for security and a separate one for backup, but none of them work together. You constantly jump between dashboards, chasing security alerts and patching vulnerabilities that should have been handled automatically. Backups feel scattered and updates drag on longer than they should. No matter how much effort you put in, the same problems keep coming back.

Kaseya 365 Endpoint is built to ease the burden

It's a powerful, fully integrated solution that brings endpoint management, security and backup together in one place. No more juggling disconnected tools, no more wasted hours on manual tasks. Because Kaseya 365 Endpoint is built as a single, unified platform, automation works at an entirely new level. Patching happens on time, security updates roll out seamlessly and ransomware threats are detected and stopped before they spread. Everything just works without constant firefighting.

This is a smarter, more efficient way to manage IT that allows you to grow your client base without burning out your team or breaking the bank.

How Kaseya 365 Endpoint helps MSPs

Keeping up with thousands of endpoints is a relentless task. The [Kaseya 2025 Global MSP Benchmark Survey](#) reveals just how demanding it is — about one in three technicians reported managing more than 750 endpoints.

MSPs who switch to Kaseya 365 Endpoint gain:

- **Robust remote monitoring and management:** With real-time insights and proactive automation, Kaseya 365 Endpoint provides complete visibility into every endpoint, ensuring issues are detected and resolved before they impact productivity.
- **Hands-free patch and vulnerability management:** Kaseya 365 Endpoint ensures all devices stay protected against known vulnerabilities, reducing security gaps without adding to your workload.
- **AI-powered antivirus (AV) and endpoint detection and response (EDR):** With integrated AI-driven threat detection and rapid response, Kaseya 365 Endpoint adapts to evolving risks, neutralizing attacks without manual intervention.

Be stronger with Kaseya 365 Endpoint

Harness automation to strengthen your MSP operations

Taking on more clients should feel like an opportunity, not a burden. But when you are stuck juggling disconnected tools and relying on manual workflows, every new endpoint feels like more work than it should.

With thousands of built-in automations, Kaseya 365 Endpoint is like having an unstoppable IT team working behind the scenes, handling routine tasks and keeping everything running smoothly. Your technicians get time back to focus on strategic work and high-value clients while you find freedom from the constant pressure of hiring just to stay afloat.

How Kaseya 365 Endpoint automations enhance security

Endpoint security and threat detection

- **Automations:** Endpoint Shortcuts for EDR & AV, Alert Trigger for EDR Events, SafeCheck for EDR & AV Activity.
- **Purpose:** Streamlines security event monitoring by reducing clicks needed to verify threats, consolidating alerts into a single module and improving visibility into endpoint security status.
- **Impact:** Speeds up threat response and remediation, reducing security risks.

Automated deployment and patching

- **Automations:** One-Deploy for RMM policy, RocketCyber and third-party patching.
- **Purpose:** Simplifies the deployment of security tools, ransomware detection and patch management policies to endpoints.
- **Impact:** Reduces time spent on manual configurations, ensuring quick and consistent security updates.

Ransomware detection and response

- **Automations:** One-Deploy for ransomware detection.
- **Purpose:** Enhances ransomware protection by automating detection policies and ensuring swift response and remediation.
- **Impact:** Minimizes the spread of ransomware and improves endpoint recovery time.

Backup and recovery management

- **Automations:** One-Deploy for Backup install and True-Sync for AV and EDR health status.
- **Purpose:** Ensures backup solutions and antivirus tools are properly installed and running on all endpoints.
- **Impact:** Reduces downtime and data loss by improving system resilience and visibility.

Streamlined endpoint management

- **Automations:** SmartLook for EDR, True-Sync for organizations, Microsoft 365 integration.
- **Purpose:** Centralizes endpoint monitoring, syncing organization-wide settings and improving management workflows.
- **Impact:** Reduces administrative workload while enhancing security posture and operational efficiency.

What our customers are saying

At the heart of Kaseya 365 Endpoint lies the robust Datto RMM solution that integrates seamlessly with security and backup solutions, providing a fully unified setup. Here's what our customers are saying about its impact:

"Datto RMM is quite easy to use. I didn't have to train much to use it. You could tweak it as much as you want. Even on a not-so-good internet connection, you can turn off some features to reduce bandwidth consumption. The user interface is great and doesn't eat up your screen space. Users hardly notice the client running on their device as it leaves close to no footprints. There are no crashes, and it offers a good security feature that ensures a user's screen is locked as soon as you disconnect, preventing unauthorized access to the device."

Verified G2 reviewer ★★★★★

"I have used probably 5 or 6 RMM platforms in my career, and they all have their advantages and disadvantages. Datto RMM is great if you are looking for an integrated solution with other Kaseya products. The ability to hop over to other systems in a flash saves time, and 'time is money,' but the thing I like best about Datto RMM, and Kaseya, for that matter, is their support."

Verified G2 reviewer ★★★★★

Be more secure with Kaseya 365 Endpoint

Protect your clients with integrated security solutions

Having the right security tools is one thing but getting them to work together is what truly keeps threats out. Disconnected solutions leave blind spots, and blind spots invite attacks. Kaseya 365 Endpoint eliminates those gaps by bringing security, backup and automation into one unified platform. Experience a powerful, always-on defense that protects against even the most advanced threats:

Layered defense

Kaseya 365 Endpoint combines EDR and AV, delivering continuous monitoring and rapid threat detection. The Pro version comes with the added benefit of managed detection and response (MDR)/security operations center (SOC) services for expert-driven remediation. How effective is it? A [Miercom report](#) found that Datto EDR with Datto AV achieved a 99.62% malware detection rate, far outperforming the industry average of 73%.

Ransomware rollback

If ransomware is detected, it does not just stop the attack — it reverses it. Encryption is halted in real time, and affected files are restored instantly, ensuring minimal disruption.

Automated patch management

Patching is one of the most overlooked but critical aspects of security. Kaseya 365 Endpoint ensures your endpoints stay up to date automatically, eliminating vulnerabilities that cybercriminals love to exploit.

Backup

Even the best security can be breached. That is why backup is your last line of defense. Kaseya 365 Endpoint provides integrated, reliable backup solutions that restore data quickly after an attack — minimizing downtime and keeping your clients operational.

What our customers are saying

“

“The 24/7 SOC has been very beneficial. I received a call one night from the SOC that led me to stop a cyberattack on a customer. The call alerted me to an issue, and I was able to stop it before it was able to cause any harm.”

Verified G2 reviewer ★★★★★

“

“Kaseya 365 has helped us put a stamp on IT with the ease of setup, monitoring and remote automation! They take pride in what they put on the market, so thank you!”

Verified G2 reviewer ★★★★★

Be more profitable with Kaseya 365 Endpoint

Improve your cash flow and boost your bottom line

Great IT solutions often come with a hefty price tag, but Kaseya 365 Endpoint is built to solve both your financial and technical challenges, helping you cut costs by up to 70% while reclaiming 40+ hours per month from manual, repetitive tasks.

Lowers your operational costs

With built-in security, backup and automation, you eliminate the need for multiple costly solutions and license fees, reducing expenses by up to 70%.

Boost technician efficiency

Automated patching, endpoint management and ransomware rollback free up your team, saving them 40+ hours a month to focus on revenue-generating work.

Priced for profitability

Starts at less than the cost of your morning coffee run, making enterprise-grade security and management accessible without breaking the bank.

What our customers are saying

“

“It is safe, easy to use and highly comprehensive, offering more options than its competitors. It is also scalable, easy to implement and integrate, which enhances productivity and improves the responsiveness of the support provided.”

Verified G2 reviewer ★★★★★

“

“Convenient, reliable and excellent for inventory tasks. The agent is really easy to deploy and is lightweight, but very powerful. I use it almost daily to administer a fleet of PCs remotely. It is an invaluable tool for a remote IT support person.”

Verified G2 reviewer ★★★★★

One solution for complete endpoint management

Kaseya 365 Endpoint simplifies IT management so you can make your MSP efficient and profitable. When your tools work smarter and cost less, your business runs smoother and profits grow faster.
