# Secure, scalable Azure resilience – without the overhead

## Consistent protection, reliable recovery.

Critical workloads are moving to the cloud as organizations and MSPs expand their use of Microsoft Azure, raising the stakes for security, recovery and business continuity. Yet many backup approaches still rely on in-tenant storage, customer-managed infrastructure and fragmented configurations, increasing exposure to ransomware, operational complexity and unpredictable costs.

Datto Backup for Microsoft Azure is a cloud-native solution built to deliver true Azure resilience. By securing immutable backups outside the Azure tenant and eliminating operational overhead, it ensures reliable recovery, consistent protection and predictable operations at scale — all without added infrastructure or complexity.

Benefit	How Datto Backup for Microsoft Azure delivers	Key capabilities
<b>Reduce Azure risk with secure, isolated backups</b>	<b>Protect critical Azure environments by storing backups outside the Azure tenant, reducing exposure to ransomware, compromised accounts and tenant-level attacks.</b>	<ul style="list-style-type: none"> <li>• Backups stored outside Azure in a dedicated backup cloud</li> <li>• Immutable backup storage prevents deletion or modification</li> <li>• Unique credentials, MFA, logical separation from production Azure environments</li> </ul>
<b>Scale protection across all Azure workloads</b>	<b>Ensure consistent protection as environments grow in size and complexity.</b>	<ul style="list-style-type: none"> <li>• Optimized for Azure file shares, blob containers and virtual machines</li> <li>• No storage caps or volume-based limits</li> <li>• Cloud-native architecture designed to expand across additional Azure workloads</li> </ul>
<b>Increase ROI with lower cost and simplified operations</b>	<b>Reduce complexity, control costs and deliver consistent protection across Azure environments at scale.</b>	<ul style="list-style-type: none"> <li>• Automated onboarding with policy-based scheduling</li> <li>• Centralized management for consistent protection</li> <li>• Predictable, consumption-based pricing — no hidden infrastructure costs</li> </ul>

"MSPs manage backups for hundreds of businesses — something Microsoft's tools weren't designed for. Datto Backup for Microsoft Azure centralizes everything, so you can understand everything that's happening at any given moment."

**Rick Topping, Vice President of Operations and Technology, Ceeva Inc.**

"From a security standpoint, if an Azure admin account is compromised, it's game over. With Datto, there are many layers of security and redundancy that allow us to know with certainty that backups will be accessible — no matter what."

**Oscar Diaz, CEO, Tecbound Technology LTD.**

### The gap in Azure resilience

**63%**

of SMBs have workloads in public cloud, an 8% year-over-year increase

**52%**

of SMBs report it would take "days" to "weeks" to recover critical public cloud data

**86%**

of SMBs cite managing cloud spend as their top challenge

Deliver resilient Azure protection with confidence.
